

QuickVoice™

Voice Response for Mobile Computers

BENEFITS

- Enables officers to obtain information on dangerous suspects/vehicles without looking at the computer screen
- Allows all information received on the mobile computer to be evaluated quickly and accurately
- Decreases patrol vehicle accidents by minimizing screen distraction
- Reduces contact time with law violators
- Provides voice prompts with specific FBI instructions for NCIC terrorist warnings
- Works with any mobile data software - no need to replace existing technology

The APS QuickVoice™ software provides an audible voice that reads the data received on the mobile computers in the patrol vehicles. QuickVoice works in conjunction with each agency's current mobile data software to read key NCIC (National Crime Information Center), motor vehicle, warrant, and other information to officers through the mobile computer. QuickVoice analyzes all of the information returned from the mobile query files and provides specific information, such as: driver's license status; color, make and model of the vehicle; outstanding warrants; stolen vehicles; etc. In addition, the "on-board intelligence system" built into the application automatically calculates tag expiration dates, the length of outstanding violations, alerts officers of possible terrorist suspects, and conducts additional analytics.

QuickVoice is not a text-to-speech technology that utilizes artificial/simulated sounds to merely read-back all of the data on a computer screen. The QuickVoice software analyzes the information provided to officers and uses a clear human voice to notify officers of the important data items. Officers receive an abundance of information on their mobile computers, but it is not provided in a standard, user-friendly format to read. With the QuickVoice software, all of the pertinent information is verbalized for the officers and they no longer have to look at the mobile computer screen to get the information they need.

The patented QuickVoice software ensures critical information is delivered quickly and accurately, enabling officers to focus their attention on the roadway and potentially dangerous suspects/situations.

Advanced Public Safety (APS) develops innovative technology solutions specifically designed to address the challenges of today's public safety agencies. APS focuses on creating solutions that operate in conjunction with the mobile computers and handheld devices utilized by law enforcement, corrections, fire and EMS personnel. The APS solutions work with an agency's existing technology infrastructure to significantly increase officer safety and productivity.

- NCIC Clear
- 98 Black Lexus 4 Door
- Expired Tag: 05/18/2003
- License Not Valid
- 38 Year Old White Male

Computers have become an essential tool for law enforcement. However, it is almost impossible for an officer to maintain their focus on suspicious vehicle/individual(s) and read all of the information that is provided through the mobile computer.

QuickVoice eliminates the need for officers to look at a computer screen as they receive critical NCIC, motor vehicle and local warrant information audibly via the mobile computer.
